My profile

Frontend Software Engineer with 10+ years of experience building scalable web applications, design systems, and digital products used by thousands of users.

Specialized in Angular and TypeScript, with extensive experience delivering accessible, responsive, and high-performance interfaces across SaaS platforms, enterprise systems, and financial products.

Passionate about creating maintainable frontend architectures, improving developer experience, and translating complex business requirements into intuitive user experiences.

Comfortable collaborating across product, design, and backend teams, with working knowledge of Java, Spring Boot, cloud infrastructure, and modern CI/CD practices.

Experienced in technical leadership, mentoring developers, code reviews, and establishing frontend engineering standards.

Academic Background / Courses

IA agents with N8N

Rocketseat
2025

Javascript

Staart
2023

Information Systems - Bachelor's Degree

Faculdade Estácio
2020 – 2024

Core Expertise

Frontend Engineering

- Angular (v2–21)
- React
- TypeScript
- JavaScript (ES6+)
- HTML5
- SCSS / CSS
- Responsive Design
- Accessibility (WCAG)

State Management & Architecture

- RxJS
- NgRx
- Design Systems
- Component Libraries
- Clean Architecture
- SOLID Principles

Testing & Quality

- Jest
- Jasmine
- Karma
- Automated Testing
- ESLint
- Prettier
- Vitest
- CodeClimate
- SonarQube

Cloud & DevOps

- Azure DevOps
- GitHub Actions
- CI/CD Pipelines
- AWS
- Jenkins

Summary of Professional Experience

12/2025 – Present
Remote/São Paulo - SP

Fornax — Senior Frontend Engineer

Full-Time Employment (CLT Contract)

Frontend Engineer within a cross-functional squad composed of Product, Backend Engineering, QA, Agile, and Technical Leadership professionals, responsible for all frontend development initiatives within the team.

Key contributions:

- Own the frontend development lifecycle for a business-critical enterprise application used by internal and external stakeholders.
- Collaborate closely with Product Owners, Backend Engineers, QA specialists, and Technical Leaders to deliver new features and improvements.
- Drive frontend architectural decisions, coding standards, and maintainability practices within the squad.
- Deliver solutions in a complex legacy environment while balancing technical debt, business priorities, and long-term sustainability.
- Act as the frontend point of contact within the squad, supporting technical discussions, solution design, and cross-team collaboration.
- Partner with backend teams to define APIs and deliver end-to-end functionality.

Technologies: Angular, TypeScript, RxJS, NgRx, REST APIs, Azure DevOps

11/2023 – 11/2025
Remote

Provider IT – Senior Frontend Developer

Full-Time Employment (CLT Contract)

PD Tec (B3) — Senior Angular Developer

Worked on the development of a document management platform within the B3 ecosystem, participating from product conception through production deployment.

Key contributions:

- Led the frontend development of the platform using Angular 16, building the application from the ground up.
- Collaborated in product discovery, solution modeling, and architectural decision-making.
- Established frontend architecture standards based on Clean Architecture, Clean Code, and SOLID principles.
- Designed and implemented an automated testing strategy, maintaining over 90% code coverage.
- Improved deployment reliability through Azure environment management and CI/CD automation.
- Created reusable foundations that supported scalability, maintainability, and future product growth.

Banco BV — Senior Angular Developer

Supported the modernization of a large-scale banking platform undergoing migration from Angular 9 to Angular 18.

Key contributions:

- Contributed to the architectural evolution of the platform, supporting the transition from monolithic services to a microservices-based ecosystem.
- Developed and validated new business features during the migration process.
- Improved code quality through code reviews, technical guidance, and adoption of engineering best practices.
- Led internal knowledge-sharing sessions and provided technical mentorship to team members.
- Collaborated with cross-functional teams to ensure stability and continuity throughout the modernization effort.

CDNIA — React Developer & Prompt Engineer

Contributed to an AI-powered content intelligence platform designed to classify and filter journalistic information.

Key contributions:

- Developed React-based user interfaces focused on content discovery, categorization, and analysis.
- Built reusable and maintainable frontend components using modern React patterns and hooks.
- Designed and optimized AI agent workflows that reduced journalists' manual content analysis effort by 67%, improving content classification and discovery processes.
- Designed and optimized prompts for AI agents responsible for processing and evaluating corporate news content.
- Improved content relevance and classification accuracy through iterative prompt engineering and workflow refinement.
- Collaborated with multidisciplinary teams at the intersection of frontend development and artificial intelligence.

Technologies: Angular, React, OpenAI, TypeScript, RxJS, NgRx, REST APIs, Azure DevOps

07/2022 – 11/2023
Remoto

Pontomais (now VR Gente) – Frontend Angular Developer
Full-Time Employment (CLT Contract)

Contributed to the onboarding experience of a SaaS HR platform used for time tracking, payroll management, and workforce operations across web and mobile applications.

Key Achievements:

- Improved the onboarding experience of a multi-platform HR SaaS product through the development of guided user journeys and onboarding workflows.
- Implemented core onboarding features, including setup wizards and interactive product tours, designed to accelerate user adoption.
- Contributed to frontend quality initiatives, maintaining automated test coverage above 80% while supporting long-term maintainability.
- Partnered with cross-functional teams to deliver responsive, user-centered experiences across web and mobile platforms.
- Implemented a redesigned subscription payment flow that contributed to customer acquisition and revenue growth.

Technologies: Angular, TypeScript, RxJS, Jasmine, CodeClimate

11/2021 – 07/2022
São Paulo - SP

77Seg – Mobile Developer (React Native)

Service Provider

Contributed to the redesign and modernization of a multi-platform insurance benefits application available on web, iOS, and Android.

Key contributions:

- Developed mobile interfaces using React Native, delivering a consistent experience across iOS and Android platforms.
- Collaborated on the redesign of key user journeys, improving usability and simplifying access to healthcare services.
- Redesigned appointment scheduling and telemedicine flows, making critical features more accessible and intuitive for users.
- Created responsive and user-centered interfaces focused on accessibility, clarity, and ease of navigation.
- Worked closely with design and product teams to translate business requirements into scalable mobile solutions.
- Participated in the complete mobile release lifecycle, including testing, validation, App Store submissions, and Google Play Store compliance.

Technologies: React Native, JavaScript, Mobile UX/UI, App Store Connect, Google Play Console.
